

# Solution Story: Langley Air Force Base Primary & Alternate Emergency Operation Centers

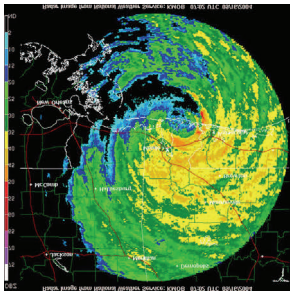

Another quality solution by the iSoft Team

Date: April 2013

## Highlights

- Custom programmed wired color Touchpanel
- Bose wall-mounted speaker system
- Large matrix switcher capable of projecting the images from 20 laptops onto 3 large displays

After a successful EOC installation at Fort Eustis and a glowing referral, iSoft Solutions' services were procured to design, engineer, provide equipment and install a comprehensive turnkey audio / video system for Langley Air Force Base Primary and Alternate Emergency Operation Centers. The mission of the EOC is to ensure complete preparedness under a full spectrum of threats by consoli-

dating all mission-essential personnel into one place to best coordinate emergency response operations. iSoft Solutions ensured that the EOC facilities had the ability to conduct unclassi-

fied video teleconferencing through a Non-Secure IP based HD VTC to help with their coordination efforts. We provided a video display with multiple input/output capabilities allowing any input device to be displayed on any wall mounted television or projection screen. All sources were routed through an analog and digital capable matrix switcher to be backwards compatible with older devices as well

as future ready for new technology. The system is controlled via a custom programmed control system at the ECO Manager's station and a wireless color touchpanel for use at the podium. A commercial grade down firing 6.5" speaker system installed throughout the room provides audio re-enforcement from all connected display sources. iSoft also installed two 15"

displays outside the entry way doors to indicate room status. Other services included programming, training and service support on all hardware.
